Heating

Set the thermostat at a maximum of 21 degrees. The cottages are heated by floor heating. When the floor is warm, it will continue to radiate the absorbed heat for a long time. Many guests make the comment that it is too hot in the cottages. We therefore advise no to put the thermostat too high.

The Kasteelboerderij is heated by radiators. You can change the temperature in each room with the thermostatic radiator valve. 3 = 21 degrees.

The fireplace in the Grote Berckt.

Please use the fireplace with the glass window always closed. This window can be moved up and down with the metal bar that lies next to the fireplace. Place the metal bar at the right bottom side of the window. You can now move the glass up and down.

You'll find burning wood in the heating area. The use of wood will be charged. The rate is indicated on the A4 on the blue boiler. When leaving please let us know how many boxes you've used.
